-
- For most digestive disorders in dogs, including puppies and for restorative care
-
-
-
- Clinically proven, highly digestible nutrition to help resolve diarrhoea in as little as 3 days.

- Gastrointestinal Biome**
-
- For dogs with acute or chronic fibre-responsive digestive disorders, including constipation or diarrhoea
-
-
-
- Clinically proven to resolve diarrhoea in as little as 24 hours, promote regular healthy stool & limit future episodes².
-
- This revolutionary food, with ActivBiome+ Technology, supports growth of beneficial gut bacteria to help restore the balance of your dog's unique gut ecosystem (microbiome) & maintain digestive health.

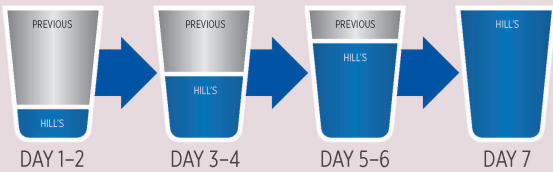

Also available as a stew

- i/d Low Fat**
-
- For dogs with digestive disorders requiring low fat food
-
-
-
- Highly digestible, low fat food with omega-3 fatty acids to support GI recovery
-
- Contains ginger to help calm and soothe the digestive tract.

How to introduce the new food?

- Gradually introduce the new food over a 7-day period
- Mix the new food with your pet's current food, gradually increasing the amount until only new food is fed
- Always refer to the feeding guide on the pack

This is a general guideline only. Your vet will recommend a transition plan specific to your pet's needs.

DIGESTIVE
CARE

FOR DOGS

RECOMMENDED FOR

<input type="checkbox"/>	Diarrhoea	<input type="checkbox"/>	Vomiting
<input type="checkbox"/>	Constipation	<input type="checkbox"/>	Stress-related digestive upset
<input type="checkbox"/>	Recovery	<input type="checkbox"/>	Digestive upset requiring a low-fat food

What are digestive disorders?

Any condition that prevents proper digestion or alters the rate at which food passes through the digestive tract is a digestive disorder.

Common causes:

- Dietary (indiscretion, food sensitivities, etc.)
- Inflammation (includes gastritis, enteritis, colitis, pancreatitis)
- Infection (bacterial, viral, parasites)
- Stress (chronic, or during/after lifestyle changes)

Does your dog have a digestive disorder?

Signs:

- | | |
|----------------------------|-----------------------------------|
| • Vomiting | • Flatulence |
| • Diarrhoea or soft stools | • Stomach gurgling |
| • Loss of weight | • Constipation |
| • Change of appetite | • Sudden inactivity or depression |

The role of microbiome in digestive health and well-being

Your dog’s gut microbiome is the ecosystem in their digestive tract containing billions of various microorganisms – including both desirable and undesirable bacteria unique to each pet. By using nutrition to balance the microbiome, you can influence the transition between acute or chronic GI disease and health.

Think of the pet’s microbiome as a mini-ecosystem that plays a significant role in balancing, not only a pet’s digestive health, but their overall well-being.

After more than a decade of analysing the microbiome, Hill’s has become a pioneer in the study of pet microbiome health and uses advanced technology to understand the gut microbiome specifically. With new insights into gut microbiome health and nutrition, we know that incorporating a dynamic blend of fibre-rich ingredients, including prebiotics, can both support and nourish this pre-existing gut “ecosystem” — the microbiome.

Hill’s developed a breakthrough **ActivBiome+ ingredient technology** — a blend of active fibre ingredients shown in a clinical study to activate the gut microbiome to support digestive health and well-being¹.

Hill’s is putting microbiome health at the forefront of digestive care and working to naturally promote regular healthy stool while restoring the balance of pet’s own unique gut microbiome.

How can the right food help?

What you feed your dog plays an important role in helping manage digestive health.

Easy-to-digest food that is gentle on tummies, **promoting better absorption of important nutrients**

A revolutionary blend of active fibre ingredients to **activate the gut microbiome, and support digestive health and well-being**

Great tasting food that **encourages dogs to eat** even through periods of illness

Prebiotic fibres help **promote healthy gut bacteria**

Enriched with psyllium to **support regular bowel movements and bowel health**

Increased electrolytes help **compensate for mineral loss** due to vomiting and diarrhoea

Clinically proven antioxidants **support a healthy immune system and natural defence**

Not artificially preserved. No synthetic colours. No artificial flavours.
